

Test Name	Description
Hepatitis B Surface Ab, Quant	Measures the amount of surface antibodies to determine immunity.
Hepatitis B Core Ab, Quant	Measures the amount of core antibodies indicating past or chronic infection.
Hepatitis B Core Ab, Total	Detects both IgM and IgG antibodies to show past infection.
Hepatitis B Core Ab, IgM	Detects IgM antibodies indicating acute or recent infection.
Hepatitis B Core Ab, IgG	Detects IgG antibodies indicating past infection.
Hepatitis B Viral DNA, Quant, PCR	Measures the level of HBV DNA in the blood to assess viral replication.
Hepatitis B e Antigen	Indicates active viral replication and high infectivity.
Hepatitis B Viral DNA, Qual, PCR	Detects the presence of HBV DNA without quantifying the amount.
Hepatitis B Surface Antigen with Reflex	Confirmation Detects the presence of surface antigen and confirms with further testing if positive.
Hepatitis B Core Antibody Total Panel	Comprehensive test to detect total core antibodies (IgM and IgG).
Hepatitis B Immune Profile	Comprehensive panel to assess immunity status and past infection.
Hepatitis B and C Panel	Tests for markers of both hepatitis B and C infections.
Hepatitis B Panel	Comprehensive panel to test for multiple hepatitis B markers (surface antigen, core antibody, etc.).
Hepatitis B Surface Antigen (HBsAg)	Detects the presence of surface antigen, indicating active infection and infectivity.
Hepatitis B Surface Antigen Panel	Detects the presence of surface antigen, indicative of active infection.
Hepatitis B Surface Ab Panel, Quant	Measures the amount of surface antibodies to assess immunity.
Hepatitis B Core Ab IgG Panel	Specifically detects IgG antibodies to indicate past infection.
